

```

-- 1) create a database amazon
-- 2) use amazon
-- 3) create a table customers :- customer_id int primary key auto_increment,
--   customer_name varchar(225) not null,
--   city varchar(225) not null,
--   email varchar(225) unique,
--   created_at date default current_date

-- 4) create a table products:-
--   product_id int primary key auto_increment, product_name,
--   category, price decimal(9,2) check(price > 0),
--   stock int check( stock >= 0)

-- 5) create a table customer_products :-
--   customer_id, product_id, quantity
--   primary key(customer_id, product_id)
--   foreign key(customer_id)
--   foregin key(product_id)

-- 6) create a table orders:-
--   order_id pk, customer_id, order_date, total_amount
--   foreign key(customer_id)

-- 7) Insert sample records into all of the tables atleast 5 to 10 records per
tables

/*
1 Show all customers ordered by name (A-Z).
2Show top 5 most expensive products.
3 Show the 3 cheapest products (use LIMIT).
4 Skip first 5 products and show next 5 products.
5 Show total number of customers.
